

# AMBULANCE REMOUNTS

WHEN WE SAY "BUILT FOR LIFE," WE MEAN IT

When it comes to remounting your Braun ambulance, who better to assist you than the original equipment manufacturer? We have detailed records on the history of your ambulance, including original programming files, complete electrical schematics, and any warranty service work completed over the lifetime of the module. As the OEM, we also have access to the newest technology and innovations available. The same team of design, electrical, and chassis specialists that built your unit originally will lend their expertise to your remount and refurbishment project. Our engineering resources are skilled in rebuild, repair, modifications, and upgrades. Each step in the process is well documented, resulting in a like-new ambulance complete with thorough documentation for future service work.

We can help you maximize your investment in your current ambulance module by placing it on a new chassis and completing upgrades to the latest industry standards. Some departments have been able to remount the same module several times, saving money and maximizing the use of their existing unit each time. An ambulance remount with Braun is smart investing for the long term and fits your budget in the short term. In fact, remounting and refurbishing an existing ambulance can **save anywhere between 20 and 50% over buying new.**

**WE MEET AND EXCEED THE QUALIFICATIONS OF A REMOUNTER.**

## FEATURES/BENEFITS OF A BRAUN REMOUNT:

- ASE/EVT Technicians
- NHTSA Registered as Final Stage Manufacturer
- Dedicated Chassis Coordinator Working with 9 Chassis Suppliers and 46 Chassis Platforms
